DETERMINING YOUR BABY'S SEX!

FOR A FEMALE FOETUS

- * A douche of 15—20 ml white vinegar in 500 ml of cooled boiled water is used 10—15 minutes before coitus.
 - * Frequent coitus is performed in the 7—10 days before ovulation.
 - * The last coitus should be at least 24 hours, and preferably more, before ovulation is expected to occur, and abstinence should then be practised for at least a week.
 - * Intercourse should be face-to-face, and the ejaculate should be deposited low in the vagina, preferably just inside the introitus.
 - * Intercourse should cease with ejaculation.
 - * Female orgasm should not occur.
-

FOR A MALE FOETUS

- * A douche of 5 g of baking soda in 500 ml of cooled boiled water is used before intercourse.
- * Abstinence should be practised from the end of menstruation until after ovulation has occurred.
- * Vaginal penetration should be from the rear, so that ejaculation will occur high in the vaginal vault, and preferably against the cervix. The man should have deep penetration at the moment of ejaculation.
- * Intercourse should cease with ejaculation.
- * Female orgasm should occur just before ejaculation.
- * The procedure should be repeated two or three times in the next 24—48 hours.
